GROUP

Lighting has always been a creative design process, sometimes used as an enhancement of the context, other times isolated as an accessory phase of the architectural composition or relegated to mere necessity, but above all it is, and cannot be other than the revelation of the living and inhabited environment.

Lighting the exterior is something even more delicate, that acts where the building ends and the surroundings begin.

In this case, we work in areas that are often shared, in those border spaces that have little of the exclusively private home environment. We are outside, where stranger looks can travel through space and where often these same spaces are constructed in order to be the filter between the natural and the designed. In some places the quality of lighting becomes a shared quality, an addition to the urban landscape: even when it appears to be limited in the individual garden, it influences and conditions the general context, more than we can imagine.

In the outdoors, the perception of light and its diffusion take very marked evidence and their management becomes the creation of atmospheres that are useful and delightful. When the instruments allow non-invasive installations the control of light becomes the creation of emotional and balanced scenarios, without light pollution.

We think the best outdoor product is that which illuminates while remaining invisible, so we have studied solid but non-invasive geometries where vegetation never represents an obstacle but rather participates and completes the design framework.

Our collection is virtually divided into two worlds, that of the indispensable elements, drawn with elementary and minimal geometries, and that of the characterizing elements where the product provides maximum camouflage and unexpected strength.

In these two areas, we have the possibility of countless configurations, optical types, and installation options. We have obtained a range of products organized by complementary elements, where it is not only possible to read a stylistic continuity, but it is also easy to configure complex products where a decorative appearance hides high-quality optics and performances. On these basis arises the design of our instruments: performances, camouflage and controlled beams are the weapons that make them effective players in balanced and professional projects.

To ensure quality, we submit our products to cyclic immersion and pressure spraying, a testing method that allows us to bring the conditions of use to the limit and prevent damage even in extraordinary situations.

Tell me how you talk! Our new configurator_

This catalogue is innovative since it introduces a configurator to select a product and its characteristics. Thus, this tool standardizes the reading along with our website.

By using our configurator, it is possible to choose colour rendering, temperatures and the available control systems. Our configurator greatly improves freedom of choice and product knowledge.

The screenshot shows the product page for the TRIPO medium 600mm - 230V. The main image shows the bollard in a natural setting. The 'Features & Benefits' section lists performance, optics, physical, and electrical characteristics. The '600mm high triangular shaped bollard' section provides a detailed description of the product's design and mounting options. The 'CRC' section highlights the corrosion-resistant coating. The 'Product Configurator' section allows users to select various options such as housing, power, body finish, cover finish, and connectors. Below the configurator, there are sections for 'Related products' and 'Projects in which the product has been used'.

Our paper catalogue

Intro

TRIPO SMALL 300 / MEDIUM 600 / LARGE 800

TRIPO
Discovers luminaires with 120° or 550° beam distribution.

Boiled with triangular structure, 800 mm high for ground and wall mounting equipped with LED board and waterproof diffuser, with 20° emission beam, also available with three spheres for omnidirectional light distribution. The structure is designed to be robust and lightweight, easily installable into the surrounding environment. The accessory sphere, installed at the factory, gives the

future nighttime visibility, transforming it from a generic light source into a signal and a presence. 800000 lumen/watt power from 4.5w (4500K) or 8w (3000K) in 2700K, 3000K or 4000K in CCT. Lifetime of 40,000 hours at L70. Dusty construction treatment and IP65. The powder-coated finish options include natural and textured colors such as: charcoal grey, mud brown, matt sand, warm white and rust effect. Protection grade IP65. As an alternative to the diffusing sphere, a shading accessory

is available to transform the emission by participating in the aesthetics of the product, giving it a strong decorative and atmospheric appearance. Up to three spheres can be used per appliance. This product complies with EN 62471:2008 requirements. It is classified as low risk for photobiological safety of lighting systems (SELV). CQC, supplementary treatment, suggested in environments subject to extreme conditions, is available upon request.

For each product a common code is shown, then you will fill each field by using the code corresponding to the selected features, such as control system, power, finish and CRI-CCT. When necessary it is indicated that the code must be completed to select Ring-Optics or Power Supply, depending on the product.

Finally out!_

It was time to go for a walk, taking “outside” the passion, the attention and the experience Exenia has acquired to this date. We offer small, resistant, mimetic and performing products, essential geometries with warm and natural finishes.

The image features several optical components and lenses scattered across a white background. At the top, there are several small, circular lenses and a larger, more complex lens assembly. Below the main text, there are several larger lenses, including a prominent one with a textured, concentric ring pattern. The components are arranged in a way that suggests a variety of optical solutions.

An optical solution_

An optical system that works well not only excels in lumens output, but it enables manufacturers to offer products with reduced power, allowing planners to optimize consumption. For us, the innovation cycle ends when the technical advantage returns to the common plate and is summed up in quality of life.

Naturally resistant _

We wanted to pay attention to the durability of our models, ensuring that even the most delicate of them could resist impact and be protected from ordinary maintenance tools. Our products are all designed as watertight units: insulating the vital components we guarantee water tightness even during installation. And for more extreme conditions, fixtures can be supplied with CRC treatment.

Size matters_

Our wish was to be invisible, so we worked to be as confined as technology allows us to be. We prefer to be timid rather than bold and so we tuned performance and size in essential and versatile products that know how to move in various contexts in the most respectful and minimal way possible.

A natural palette_

Choosing rough and opaque finishes with highly mimetic colors directly inspired by natural materials is the basis of our idea of environmental integration of the fixture. White plaster, sand gray, mud, rust, cement, charcoal gray: tactile and opaque surfaces, interacting with metallic effects of dark bronze, copper and gold defined to be harmonious and coherent with matter and the patina of time.

WOLF

WOLF _ projector

With the perfect balance between performance and compact dimensions, this projector is designed to solve the needs of accent lighting in the most varied contexts. Precision optics and high-quality materials make it a flexible, reliable and professional tool, capable of adapting to environmental requirements and plant choices in a natural way thanks to the variety of optical versions and optical accessories. As an optional accessory, the translucent front rings can obtain aesthetic connotations and notes of color that "lit up" without affecting the proper aspects of the emitted beam.

WOLF BASE

WOLF BASE_ projector

WOLF BASE

LED base projector with integral power supply_

LED base projector with body in die-cast aluminium and glass sealed optical chamber. Luminaire head allows for 305° rotation and 135° tilt. Available with nominal 7W (840lm) in 2700K, 3000K or 4000K in CRI95 or 3000K in CRI85. Lumen maintenance of 115,000 hrs at L80 B10. Natural powder coat finish options include carbon grey,

mud brown, matt sand, matt white textured and rust effect. Optics choices include Spot (15°), Flood (21°), Medium (32°) and Wide (38°). WOLF is available with a range of optical accessories including honeycomb louvre (factory fitted) as well as coloured ring, snoot, visor and adjustable elliptical lens accessory 14°x60° (field changeable

and to be ordered separately). Coloured rings are made from UV resistant PMMA and are available in translucent orange, translucent blue, translucent green and neutral. Ingress protection of IP66. Class I luminaire including ON/OFF power supply fitted in the base.

LED projector with remote power supply_

LED projector with body in die-cast aluminium and glass sealed optical chamber. To be specified with remote power supply and a choice of wall mount, tree mount or stake mount options. The luminaire head allows for 305° rotation and 135° tilt. Available with nominal 7W (840lm) or 13W(1690m) in 2700K, 3000K or 4000K in CRI95 or 3000K in CRI85. Lumen maintenance of 115,000 hrs at L80

B10. Natural powder coat finish options include carbon grey, mud brown, matt sand, matt white textured and rust effect. Optics choices include Spot (15° for 7W and 19° for 13W), Flood (21° for 7W and 25° for 13W), Medium (32° for 7W and 37° for 13W) and Wide (38° for 7W and 54° for 13W). WOLF is available with a range of optical accessories including honeycomb louvre (factory fitted) as well as coloured

ring, snoot, visor (field changeable and to be ordered separately). Coloured rings are made from UV resistant PMMA and are available in translucent orange, translucent blue, translucent green and neutral. Ingress protection of IP66. Class III luminaire for use with remote ON/OFF or DALI power supply.

Thanks to this accessory it is possible to obtain a narrow and sharp beam, with a strong contrast between the illuminated and unlit area.

Cut-Off

Code

9G 050

Thanks to this accessory it is possible to obtain an asymmetrically narrower and sharper beam with a greater contrast between the illuminated and non-illuminated area.

Visor

Code

9G 051

With this accessory you can obtain a narrow beam with an elliptical 18°x 40° (7W), 23°x65° (13W) shape.

Elliptical lens

Code

9G 052

only for Spot optics

With this accessory, you can create connections while ensuring IP68 grade protection.

CACTUS

CACTUS_pole mount system

Designed as a flexible product among projector and floodlight applications, the Cactus line with its wide range of configurations, presents itself as a real outdoor system. On the aluminum profile, we can aggregate or distribute diversified sources paired with slim but very strong stems.

The design of the Cactus support is dictated by the search for small dimensions and contextual resistance, two requirements that allow it to be used in a very wide spectrum of applications. Engineering and common sense have established the possibility of reaching a height of two meters with a slender and robust structure that makes the cactus system a light and elegant sign with a very low visual impact on the context.

CACTUS

CACTUS_pole mount system

CACTUS

Pole mount system to use with WOLF LED projector_

Pole mount system to use with WOLF LED projector for surface and wall mount installations. The CACTUS pole is available in three standard lengths of 600mm, 1000mm and 2000mm. Up

to three WOLF LED projectors can be fitted on the CACTUS pole for 1000mm and 2000mm. Up to two LED projectors can be fitted on the 600mm CACTUS. Natural powder coat finish options

include carbon grey, mud brown, matt sand, matt white textured and rust effect. A range of external drivers and accessories is available for this range to enable ON/OFF and DALI dimming.

CACTUS SPOT WOLF_ accessories

Colored polycarbonate decorative ring in paste, translucent appearance.

Thanks to this accessory it is possible to obtain a narrow and sharp beam, with a strong contrast between the illuminated and unlit area.

Thanks to this accessory it is possible to obtain an asymmetrically narrower and sharper beam with a greater contrast between the illuminated and non-illuminated area.

With this accessory you can obtain a narrow beam with an elliptical 18°x40° (7W), 23°x65° (13W) shape.

With this accessory, you can create connections while ensuring IP68 grade protection.

IP₆₈

With this accessory, you can create connections while ensuring IP68 grade protection.

CACTUS STRIP

CACTUS STRIP_ pole mount system

CACTUS STRIP

Pole mount system to use with WOLF LED projector and LED strip_

Pole mount system to use with WOLF LED projector for surface and wall mount installations. The CACTUS pole is available in three standard lengths of 600mm, 1000mm and 2000mm. Up to three WOLF LED projectors can be

fitted on the CACTUS pole for 1000mm and 2000mm. Up to two LED spots can be fitted on the 600mm CACTUS. An additional LED Strip in 300m or 600m is fitted at the back of the CACTUS pole, creating a linear lighting element.

Natural powder coat finish options include carbon grey, mud brown, matt sand, matt white textured and rust effect. A range of external drivers and accessories is available for this product to enable ON/OFF and DALI dimming.

YOMA

YOMA_ ceiling lamps / wall

Graceful, minimal and sometimes informal, Yoma combines a purist and soft shape with colors and accessories that complement the project, making it invisible or protagonist, complement or simple service to the design of the spaces. The extra matt or rough finishes accentuate the materiality of tempered glass used in large thickness to give resistance and infrangibility.

YOMA

aluminum and tempered glass_high efficiency SMD LED source_

Ceiling or wall mounted SMD luminaire with omni-directional, diffused light distribution and a diameter of 130mm. The luminaire consists of a die-cast base, combined with tempered glass. Available with nominal 4.5W (450lm) or 8W (750lm) light source in 2700K,

3000K or 4000K in CRI85. Lumen maintenance of 50,000 hrs at L80 B10. Mix and match finishes for the base and the coloured ring accessory, choosing from five colour choices: carbon grey, mud brown, matt sand, matt white textured and rust effect. A corrosion

resistant coating (CRC) is available on request. Ingress protection of IP65. Class I luminaire with integral ON/OFF power supply, dimmable via PHASE CUT dimmer.

The maximum of minimalism accompanies the non-shapes of Rock, whose task is to blend into the context and illuminate the environment with a soft and diffused beam. Designed to limit glare and disturbance, it is equipped with an internal accessory to minimize any luminance. Textured finishes and extra matt paint formulas together with the extremely small dimensions make Rock a unique piece with the project.

ROCK

PLAY

PLAY_wall

Designed to pair easily with any context, the elements of the Play family make the relationship between size and performance their strength, the absolute sobriety of the geometries supports advanced optical systems and a wide range of beam configuration. Available in bi-emission or single-emission versions, they differ in size and light distribution. There are numerous accessories that can be added to obtain graphic connotations, beam definition or elimination of luminances.

PLAY SQUARE UP OR DOWN

PLAY SQUARE_wall

PLAY SQUARE

Sealed optical chamber and high efficient LED light source_

Square LED wall luminaire with single LED light source for either up or down light distribution. Die-cast aluminium body and glass sealed optical chamber. Available with nominal 5W (635lm) in 2700K, 3000K or 4000K in CRI95 or 3000K in CRI85. Lumen maintenance of 115,000 hrs at L80 B10. Natural powder coat finish options include carbon grey, mud brown, matt sand, matt white textured and rust effect. Optics choices include Spot (15°), Flood (21°), Medium

(32°) and Wide (38°). PLAY is available with a range of optical accessories including honeycomb louvre (factory fitted) as well as coloured ring, snoot, visor and adjustable elliptical lens accessory 18°x40° (field changeable and to be ordered separately). Coloured rings are made from UV resistant PMMA and are available in translucent orange, translucent blue, translucent green and neutral. An external cover accessory is also available to order separately.

This accessory covers the luminaire entirely so that the LED light source is deep recessed behind the cover. This creates a sharp beam cut off and a more decorative look of the luminaire. Additional finish options include copper textured, gold textured and dark bronze. Ingress protection of IP67. Class I luminaire including ON/OFF power supply.

Round LED wall luminaire with two LED light sources for up/down light distribution. Die-cast aluminium body and glass sealed optical chamber. Available with nominal 2x5W (2x635lm) in 2700K, 3000K or 4000K in CRI95 or 3000K in CRI85. Lumen maintenance of 115,000 hrs at L80 B10. Natural powder coat finish options include carbon grey, mud brown, matt sand, matt white textured and rust effect. Optics choices include Spot (15°), Flood (21°), Medium

(32°) and Wide (38°). PLAY is available with a range of optical accessories including honeycomb louvre (factory fitted) as well as coloured ring, snoot, visor and adjustable elliptical lens accessory 18°x40° (field changeable and to be ordered separately). Coloured rings are made from UV resistant PMMA and are available in translucent orange, translucent blue, translucent green and neutral. An external cover accessory is also available to order separately.

This accessory covers the luminaire entirely so that the LED light sources are deep recessed behind the cover. This creates a sharp beam cut off and a more decorative look of the luminaire. Additional finish options to the before mentioned body finish options for this cover include copper textured, gold textured and dark bronze. Ingress protection of IP67. Class I luminaire including ON/OFF power supply.

Completely in stainless steel Brick is available in surface-mounted, projector or recessed versions. The essential shape and solid structure make it an excellent stress-proof instrument where light intensity and interchangeable optics are needed. The special textured and opaque paints, the rust effect and the cement gray make its light a discreet presence able to respect architecture and landscape without sacrificing performance and quality of light.

TRIM NANO

Miniature form factor_

Mini round LED inground luminaire with a diameter of 30mm and a shallow recess depth of 31mm. Stainless steel housing with additional trim finish options including carbon grey, matt white textured and rust effect. Available in 2700K, 3000K and

4000K in CRI85. Nominal power consumption of 1.2W (120lm). Lumen maintenance of 100,000 hrs at L80 B10. Available with two optics choices including Medium (30°) and Extra Wide (73°). Luminaire to be installed with a blockout accessory (to

be ordered separately). Suitable for walk over installations with a max. weight of 1000kg. Ingress protection of IP67. Class III luminaire to be used with remote On/Off power supply.

TRIPO

TRIPO_bollard

There are forms that derive directly from the functional choices of an object, Tripo is a classic example. We wanted a light product, "transparent, capable of soft and extensive horizontal radiation, easy to install and, above all, resistant. This structure is born with a wide ground anchoring base which in its essentiality leaves free space to the eye and vegetation, bringing the emissive source upwards, in an optical group sealed in die-cast aluminum, invisible and protected. Available in three heights and a Tripo wall version allows free and complete compositions.

TRIPO WALL

TTRIPO WALL_ wall

TRIPO WALL

Discrete luminaire with 120° or 360° beam distribution_

Triangular shaped wall luminaire fitted with a LED board for a wide 120° beam distribution. Also available with PMMA sphere for omnidirectional light distribution. Sturdy construction in aluminum and steel, with high adhesion powder coating. The structure is designed to be robust and lightweight, easily reconcilable into the surrounding environment. The accessory sphere, installed at the factory, gives the

fixture night-time visibility, transforming it from a mimetic light source into a signal and a presence. Available in powers from 4.5w (450lm) or 8W (750lm) in 2700K, 3000K or 4000K in CRI85. Lifetime of 45,000 hours at L80 B10. The powder-coated finish options include natural and textured colors such as charcoal gray, mud brown, matt sand, warm white and rust effect. Protection grade IP65. As an alter-

native to the diffusing sphere, a shielding accessory is available to transform the emission by partializing it and the aesthetics of the product, giving it a strongly decorative and atmospheric appearance. Up to three covers can be used per appliance. CRC supplementary treatment, suggested in environments subject to extreme conditions, is available upon request.

TRIPO_bollard

TRIPO

Discrete luminaire with 120° or 360° beam distribution_

Bollard with triangular structure, 800, 600, 300 mm high for ground and wall mounting, equipped with LED board and watertight diffuser, with 120 ° emission beam. Also available with PMMA sphere for omnidirectional light distribution. Sturdy construction in aluminum and steel, with high adhesion powder coating. The structure is designed to be robust and lightweight, easily reconcilable into the surrounding environment. The accessory

sphere, installed at the factory, gives the fixture night-time visibility, transforming it from a mimetic light source into a signal and a presence. Available in powers from 4.5w (450lm) or 8W (750lm) in 2700K, 3000K or 4000K in CRI85. Lifetime of 45,000 hours at L80 B10. The powder-coated finish options include natural and textured colors such as charcoal gray, mud brown, matt sand, warm white and rust effect. Protection grade IP66. As

an alternative to the diffusing sphere, a shielding accessory is available to transform the emission by partializing it and the aesthetics of the product, giving it a strongly decorative and atmospheric appearance. Up to three covers can be used per appliance. CRC supplementary treatment, suggested in environments subject to extreme conditions, is available upon request.

FLEUR

FLEUR_ recessed on the ground / bollard

Perhaps the greatest expression of camouflage, Fleur hides in the greens during the day and reveals itself at night with its multiple configurations. In its decorative variants, with a spherical or conical diffuser, it becomes an emotional connotation of the night scene with a very soft diffused emission that can be arranged thanks to the flexible stems. The one-stem version is instead designed to offer real micro-projectors. Available with three lens optics that completely transform the decorative concept of Fleur by providing the designer with the most mimetic and adaptable form of accent light.

FLEUR

FLEUR_ recessed on the ground / bollard

FLEUR

Configurable system with flexible FLEUR_

Versatile lighting system for diffused and accent lighting needs, completely mimetic. FLEUR is constituted by flexible stems with reinforced terminals in powder-painted brass and steel. The LED lighting elements can be configured as a projector, available in Spot 12°, Medium 24° or Wide 41°, or with a spherical or conical diffuser for omnidirectional lighting. Each stem ho-

sts a nominal Led 1.2W (120lm) in 2700K, 3000K or 4000K in CRI85, with a lifetime of 100,000 hours at L80 B10. Mounting options for FLEUR include picket, tree, recessed and surface installation. FLEUR recessed and surface versions are available with two or three individually configurable stems, while the picket and tree versions are configured with a single stem.

The brass and steel mounting base and the optical assemblies are available in a selection of powder paint finishes including charcoal gray, mud brown, sand and corten. The FLEUR stems are coated with a high-strength hazelnut textile sheath. Degree of protection IP65. Class III device with a selection of remote drivers.

PROTECTION LEVEL

The **IP** (International Protection - IEC standard 60529) standard establishes the resistance of a product against the intrusion of solid particles (such as parts of the body and dust) as well as liquids.

The **IP** - - code is followed by two digits according to the table, the first refers to the intrusion of solid bodies, the second to the degree of protection against liquid penetration.

FIRST digit SOLID OBJECTS value 0 - 6

- IP 0-** No protection against contact and ingress of objects
- IP 1 -** Any large surface of the body, such as the back of a hand, but no protection against deliberate contact with a body part >50 mm
- IP 2 -** Fingers or similar objects >12.5 mm
- IP 3 -** Tools, thick wires, etc >2.5 mm
- IP 4 -** Most wires, slender screws, large ant etc. >1 mm
- IP 5 -** Ingress of dust is not entirely prevented, but it must not enter in sufficient quantity to interfere with the satisfactory operation of the equipment.
- IP 6 -** No ingress of dust; complete protection against contact (dust tight). A vacuum must be applied. Test duration of up to 8 hours based on air flow.

SECOND digit LIQUID OBJECTS value 0 - 8

- IP - 0** No protection against contact and ingress of liquid
- IP - 1** Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle of 15° from its normal position. A total of four positions are tested within two axes. Dripping water.
- IP - 2** Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle of 15° from its normal position. A total of four positions are tested within two axes. Dripping water when tilted at 15°.
- IP - 3** Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect, utilizing either: a) an oscillating fixture, or b) A spray nozzle with a counterbalanced shield. Spraying water.
- IP - 3** Water falling as a spray at any angle up to 60° from the vertical shall have no harmful effect, utilizing either: a) an oscillating fixture, or b) A spray nozzle with a counterbalanced shield. Spraying water.
- IP - 4** Water splashing against the enclosure from any direction shall have no harmful effect, utilizing either: a) an oscillating fixture, or b) A spray nozzle with no shield. Splashing of water.
- IP - 5** Water projected by a nozzle (6.3 mm) against enclosure from any direction shall have no harmful effects. Water jets.
- IP - 6** Water projected in powerful jets (12.5 mm nozzle) against the enclosure from any direction shall have no harmful effects. Powerful water jets.
- IP - 7** Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time (up to 1 m of submersion). Immersion, up to 1 m depth.
- IP - 8** The equipment is suitable for continuous immersion in water under conditions which shall be specified by the manufacturer. However, with certain types of equipment, it can mean that water can enter but only in such a manner that it produces no harmful effects. Immersion, 1 m or more depth.

PROTECTION CLASS

The electrical insulation classes are the homogeneous grouping defined by the IEC (International Electrotechnical Commission) which refers to the technical specifications that are applicable to an electric device to limit the risk of electrocution resulting from a failure of the system.

CLASSE	DESCRIPTION
0	These appliances have no protective-earth connection and feature only a single level of insulation between live parts and exposed metalwork. If permitted at all, Class 0 items are intended for use in dry areas only. A single fault could cause an electric shock or other dangerous occurrence, without triggering the automatic operation of any fuse or circuit breaker. Sales of such items have been prohibited in much of the world for safety reasons, for example in the UK by Section 8 of The Low Voltage Electrical Equipment (Safety) Regulations 1989 and New Zealand by the Electricity Act. However, equipment of this class is common in 110V countries, and in much of the 220V developing world, whether permitted officially or not. These appliances must have their chassis connected to electrical earth.
I 	These appliances must have their chassis connected to electrical earth (US: ground) by a separate earth conductor (coloured green/yellow in most countries, green in the US, Canada and Japan). The earth connection is achieved with a 3-conductor mains cable, typically ending with 3-prong AC connector which plugs into a corresponding AC outlet. The basic requirement is that no single failure can result in dangerous voltage becoming exposed so that it might cause an electric shock and that if a fault occurs the supply will be removed automatically (this is sometimes referred to as ADS = Automatic Disconnection of Supply). A fault in the appliance which causes a live conductor to contact the casing will cause a current to flow in the earth conductor. If large enough, this current will trip an over-current device (fuse or circuit breaker (CB)) and disconnect the supply. The disconnection time has to be fast enough not to allow fibrillation to start if a person is in contact with the casing at the time. This time and the current rating in turn sets a maximum earth resistance permissible. To provide supplementary protection against high-impedance faults it is common to recommend a residual-current device (RCD) also known as a residual current circuit breaker (RCCB), ground fault circuit interrupter (GFCI), or residual current operated circuit-breaker with integral over-current protection (RCBO), which will cut off the supply of electricity to the appliance if the currents in the two poles of the supply are not equal and opposite.
II 	A Class II or double insulated electrical appliance is one which has been designed in such a way that it does not require a safety connection to electrical earth (ground). The basic requirement is that no single failure can result in dangerous voltage becoming exposed so that it might cause an electric shock and that this is achieved without relying on an earthed metal casing. This is usually achieved at least in part by having at least two layers of insulating material between live parts and the user, or by using reinforced insulation. In Europe, a double insulated appliance must be labelled Class II or double insulated or bear the double insulation symbol (a square inside another square). Insulated AC/DC power supplies (such as cell-phone chargers) are typically designated as Class II, meaning that the DC output wires are isolated from the AC input. The designation "Class II" should not be confused with the designation "Class 2", as the latter is unrelated to insulation (it originates from standard UL 1310, setting limits on maximum output voltage/current/power).
III 	A Class III appliance is designed to be supplied from a separated/safety extra-low voltage (SELV) power source. The voltage from a SELV supply is low enough that under normal conditions a person can safely come into contact with it without risk of electrical shock. The extra safety features built into Class I and Class II appliances are therefore not required. For medical devices, compliance with Class III is not considered sufficient protection, and further more-stringent regulations apply to such equipment.

UGR IN EXENIA PRODUCTS

The UGR index - Unified Glare Rating - defines the level of irritating glare, produced by the light illuminating a room. The index is defined by many

factors which depend on the kind of the fixtures (the emitting surface of the device in relation to the flux play an important role) and the installation

environment since the finishes of the walls, the floor, the location of the furnishings, the presence of windows play a role as well.

The value is the result of the following equation:

$$UGR = 8 \log_{10} \left(\frac{0,25}{L_b} \sum_{N_a} \frac{L^2 \omega}{\rho^2} \right)$$

"Lb" and "L2" are respectively the luminance of the background and the luminance of the luminous parts of each fixture, "ω" is the solid angle subtended by the same, "ρ" is the Guth position index (function of the longitudinal distance between the human eye, the transverse plane of the source and the transverse distance between the eye and the longitudinal plane of the source).

Although today the assessment of the irritating glare level can be processed by means of a lighting design software, the above-mentioned equation can immediately point out that when defining the UGR parameter, we can consider the background luminance, the overall luminance of the installed fixtures that are in the same field of view by taking into account the solid angle of view of the observer and the position of the devices in relation to the observer.

Making it easier, the luminance is a ratio that considers the light reaching our eyes by reflection from an illuminated surface and the light that comes from an emitting surface. The luminance depends on the intensity of the source and from the apparent area of the surface directed to the observer. It is clear that the luminance value always depends on the observer position with respect to the lighting source.

The regulations which define the UGR value are in the indoor lighting UNI EN 12464-1 2011, CIE publication 117 standards.

The UGR scale can be considered for minimum values that start at 10 (no glare), up to 30 (high glare). The UGR limits are given every three units (10, 13, 16, 19, 22 etc.) since every three units there is a change to a different class in

accordance with the standard, Some fixtures of our range of products have reference values of the indexes according to the UGR tabular method for reflection coefficients 752 (0.7 ceiling, 0.5 walls, 0.2 floor) which consider X = 4H, Y = 2H as room dimensions (H is the height difference between the eye and the light sources).

We would like to remind that these values are samples and valid only in case of use of fixtures which are:

- installed in rectangular rooms;
- installed together with other fixtures of the same type and the same level;
- symmetrical and arranged in parallel to the wall.

For further information or evaluations, we recommend making a simulation by means of a lighting design software.

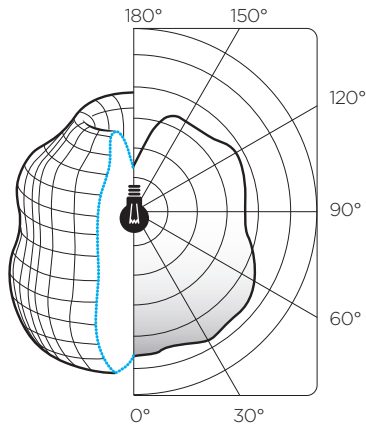

PHOTOMETRIC DATA

In this catalogue, each product has the polar diagrams reported for each power and beam combination. For ease of reference, the representations of the distributions

on international reference levels (C0-C180 and C90-C270) have been summarized for different fixtures with the same distribution of light intensities. For symmetri-

cal and rotosymmetrical fixtures only one curve is represented. For multiple optics products, the photometry should be repeated for the number of units.

— technical data

The luminous intensities shown in the diagrams are the relative intensities, therefore, to be multiplied by the flux value of the fixture expressed in klm.

Polar curves are only the initial tool to identify the behaviour and the lighting performance in the preliminary stages of each project. After that, the elum-

dat file should be thoroughly analysed. The elumdat file can be downloaded for each fixture code at our website www.exenia.eu.

INFO

LED LIFE

Each of our products is studied and tested in peyorative conditions in order to obtain an optimal ratio between operating temperatures and light emission of the diodes, it is understood that each power decrease will make possible the extension of the corresponding 'Lifetime'.

LED KEY FEATURES

The EXENIA products in the catalogue use LED lights of the leading brand in the industry, such as CITIZEN™, PANASONIC™, CREE™ and BRIDGELUX™.

In addition, Exenia ensures that its LED COB are selected with SDCM features (standard deviation of colour matching) inside the third step Mac Adam ellipse. However, compared to the plate data reported by manufacturers you should consider the tolerances that are due to LED manufacturing process. Such tolerances involve small differences between the various sources and manufactures.

DIMENSION

All dimensions are in mm, unless otherwise specified.

FINISHES COLOURS

The colours of the illustrated articles are simply indicative of the real nuance.

© Our products enforce the European Community Rules 73/23 CEE - 93/68 CEE - 89/336 CEE and the CE mark is printed on the packaging.

Reproduction of this catalogue or any part of it is prohibited. The products illustrated in this catalogue are covered by one or more Italian or international patents. The company will take legal action against any imitators.

CONSORZIO ECOLIGHT

EXENIA belongs to the Consorzio Ecolight established in 2004 to comply with the provisions of European Directive 2002/96/CE-RAEE converted by Italian law into Legislative Decree No.151 dated 25/07/2005 for the management, recovery and treatment of electrical and electronic devices at the end of their usable life, in respect of all the regulations in force on the subject of environmental safeguards.

PHOTOBIOLOGICAL RISK

The LED used belongs to the "RG (risk free)" group according to the photobiological risk rating of EN 62471: 2008.

5 YEARS WARRANTY

Exenia warrants that its products are free from manufacturing and/or material defects, in case of use in conformity with the destination, for a period of five years from the date of the invoice as indicated in the general conditions of guarantee which can be consulted on website

www.exenia.eu.

EXENIA srl reserves the right to change, at any time and without prior warning, the technical specification of any product shown in this catalogue.

Symbols_

	Product in Class I Earth connection		Diffused lighting fitting		Driver with direct current output
	Product in Class II Double insulation		Fitting as direct light		Driver with constant voltage
	Product in Class III Very low safety voltage 12V		Fitting as indirect light		Very low safety voltage conforming to EN 61347-2-2
	Defines the level of irritating glare		Fitting as direct and indirect light		Power Factor Corrector: this is for stabilizing the lamp parameters (voltage and current) when mains voltage varies
	Degree of Protection		Independent driver, that it can be installed separately outside the lighting fitting without any additional enclosure		Component or equipment suitable for cascade connection
	Degree of Protection Reflector		Drivers equipped with thermal protection. The points in the triangle replace the values (°C) of the maximum nominal temperature of the casing		European norms electrical certification
	Degree of protection Recessed housing		Drivers can be installed on flammable surface. The part of the driver which comes into contact with the flammable surface does not exceed 95°C at normal operation, and 115°C in the case of failure of the driver. DIN VDE 0710-T14		All products are manufactured in compliance with the following norms and subsequent variations; in compliance with European Norms (2004/108/CE - 2006/95/CE) for CE marking CE - 2000/55/CE - 2008/35/CE
	Glow wire		Safety transformers resistant to short circuits (integrated protection)		
	Energy classes				
	Square cutting hole				
	Round cutting hole				
	Depth downlight				
	Weight Kg				
	Product which can be installed on normally flammable surfaces (90°C).				
	Repaintable parget white finishing				
	Permanent emergency version

CRC_

The CRC treatment is an accessory galvanic process that implements resistance to corrosive attacks in extreme environments. It is recommended in the presence of direct saline mists, chemical agents in solution or sprinkling, aggressive vapors and in all conditions of high wear and abrasion.
